## **Tariff Index**

This index has no legal force. It consists of an alphabetical list of goods showing against each reference the number of either the Harmonised system chapter or heading in which goods of the description concerned are most likely to be classified. The actual classification depends, however, on the wording of the heading itself and any items thereunder, governed, if necessary, by the Section or Chapter Notes or by the General Rules for the Interpretation of the Tariff.

The index does not purport to be exhaustive. For reasons of brevity certain goods cannot be listed, but their place in the Tariff can usually be found under more general descriptions or under references to constituent materials.

In practice, an article should first be sought in the index under its most specific description. If it is not listed specifically reference should be made to a more general description or, if necessary, to the index reference for the constituent material of which the article is made.
